

# como apostar na copa do mundo na blaze

The life cycle of the Sun began roughly 4.6 billion years ago and will continue for almost another 8 billion years when it will have depleted its supply of nuclear fuel and collapse into a white dwarf.

[Life Cycle of the Sun - Astronomy's Space & Beyond Box](#) : life-cycle-of-the-sun

Complete answer: The earth is the third planet from the sun and is located at a distance of 149.59 million km from the sun. In terms of light-years, it can be quantified to  $1.58 \times 10^{-5}$  light-years and it takes 8 minutes and 20 seconds for sunlight to reach earth.
