<p></p><p>Methods: Bench and in-vivo evaluations were performe

d. For the bench visualization bifurcated silicone mock vessel was used. The POK

I technique was simulated using a 3.5 mm POT balloon. For the in-vivo evaluation

patients with angiographic bifurcation lesions in a native coronary artery with

diameter \leq 2.5 mm and $>$ 4.5 mm, SB diameter \leq 2.0 mm, and percentage diameter s

tenosis (%DS) more than 50% in the main vessel (MV) were included. Provisional s

tenting was the default strategy.</p>

<p>Background: Percutaneous coronary interventions (PCI) of bifurcation le

sions poses a technical challenge with a high complication rate. Kissing balloon

inflation (KBI) and proximal optimization technique (POT) are used to correct b

ifurcation carina after stenting. However, both may still lead to uncomplete str

ut apposition to the side branch (SB) lateral wall. Proposed herein, is a new st

ent-optimization technique following bifurcation stenting consisting of a combin

ation of POT and KBI called proximal optimization with kissing balloon inflation

(POKI).</p>

<p>Introduction</p>

<p></p><p>🎮 Earn to Die 2: Exodus</p>

<p></p>

<p>We are now returning to the Earn to Die Games series from our website,

where right now you are all invited to check out the game entitled Earn to Die 2

: Exodus, which is the second game in the series, which is pretty obvious from t

he title and image, which is going to bring back all of the amazing things that

so many of you enjoyed from the first game, and put them through all new and fre

sh levels, which we have played, and with which we have had lots of fun. If you

want, you can learn how these games work by reading the description to the end!

First, you have to choose a car, with the options you have being more as you adv

ance and get more points. With that car you will be going racing through the des
