google sistemas por baixo -end  
To check for the existence of a limit of a function at a point, you can use the following conditions:  
The function must be defined in a punctured neighborhood of the point.  
The limit of the function as it approaches the point must exist and be finite.  
[What are the conditions to check for existence of limit of a function at a ...](#)  
[What-are-the-conditions-to-check-for-existence-of-limit...](#)  
[eu quero jogar no google](#)  
How do you know a limit does not exist? In short, the limit does not exist if there is a lack of continuity in the neighbourhood about the value of interest. Recall that there doesn't need to be continuity at the value of interest. Just the neighbourhood is required.
