Shutdown operation can help clear the cache, memory and other resources of the NAS system and applications to avoid unstable or malfunctioning applications

At the same time, shutting down the system also ensures that the NAS hardware is rested and reduces the chance of hardware failure.

At the same time, shutting down the system also ensures that the NAS hardware is rested and reduces the chance of hardware failure.

At the same time, shutting down the system also ensures that the NAS hardware is rested and reduces the chance of hardware failure.
