[Odd Numbers - Definition, Properties, List, Examples - SplashLearn](#)

A number which is not divisible by 2 is called an odd number. An odd number always ends in 1, 3, 5, 7, or 9. Examples of odd numbers: 51, 543, 8765, 97, 9, etc. An odd number is always 1 more than (or 1 less than) an even number.

If a number divided by 2 leaves a remainder of 1, then the number is odd. You can check for this using $\text{num} \% 2 == 1$.

Galgos are intelligent dogs and can be trained by motivating them with rewards. It is important to teach them its name and to come to the call. In general, they don't enjoy obedience or other canine skills, prefer to be walking, socialising with other dogs or people, exploring, running and, if not, sleeping!
