

O O bet365

probability: chance (p) equal to the number of favorable results divided by the total number of possible results (n).
Example: In a game of chance, the probability of winning is 1/10. This means that for every 10 times you play, you will win once on average.
The probability of losing is 9/10. This means that for every 10 times you play, you will lose 9 times on average.
The probability of winning is 1/10, the probability of losing is 9/10. The probability of winning is 1/10, the probability of losing is 9/10.
