What algorithm is used on Online Roulette? - Quora
The roulette wheel is carefully engineered to ensure that each number has an equal probability of being selected. The outcome of each spin is determined by a random number generator (RNG) which is used to determine the winning number and color.

When you place a bet on a roulette wheel, the odds are determined by the number of pockets on the wheel. For example, if you bet on a single number, the odds are 37 to 1. This means that for every 37 times you lose, you will win once. The house edge is 2.7%.

Tiger Brokers Singapore Platform and Commission Fees
Currently, Tiger Brokers charges 0.04% of trade value for both commission and platform fees when trading Singapore stocks, and USD 0.005 per share (min. USD 100) for US stocks.
