The TL;DR version of this review is: surprising light,

extremely pocketable, does the job, not my dream charger but at 1, £ the price it is well worth it.

We've covered a product of Lepow's before, the Moonstone. Like the Moonstone, the Poki comes 1, £ with a cloth carrying case that you can stash a USB cable in (it appears to come with a 6-in-1, £ USB-& MicroUSB,) or chuck your ID and credit card in and use it as a wallet while you're out. It is 1, £ actually the first thing that stood out when I was looking at the device. The Moonstone is

still going strong 1, £ with a friend of mine a year later; The battery delivers a 90% conversion efficiency rating according to specs on the 1, £ manufacturer's website. Most batteries go from the high 70s to mid 80s. You want to see a higher number as 1, £ this is how much power gets delivered with the rest being lost in conversion.

The Poki can charge and recharge at 1, £ 2.1amps. This means you're not stuck for 20+ hours charging a 10,000mAh battery at 500mA. At 2.1 amp you should 1, £ be able to charge this in under five hours and with 90% conversion efficiency you should have around 9000mAh of 1, £ actual juice to spare. That should be enough for at least three complete charges from dead to full for any 1, £ smartphone on the market today
